

Monel Option Now Available for Thermal Corporation Band Heaters

You Asked, We Listened!

Thermal Corporation is now offering a new option available for our mica band heaters – sheaths and straps made out of Monel.

Monel is an alloy that is primarily composed of nickel and copper, with small amounts of iron, manganese, carbon, and silicone. Monel's appearance is similar to that of stainless steel. Resistant to corrosion and acids, Monel is often used in caustic atmospheres.

Several of our customers have requested band heaters that have Monel sheaths and we have listened. Thermal Corporation can now make band heater sheaths (inner and outer) from Monel! We can also use the Monel material to construct straps for our band heaters.

Interested in More Information Regarding This New Option?

Contact us today by phone at (800) 633-2962, by email at sales@thermalcorp.com, or instantly using the chat feature located at the bottom right of the page.
